# Heritage Hydrated Lime Mortars

---

Our Heritage Hydrated Lime Mortars are specifically formulated for historic masonry. In traditional load-bearing masonry the joints provided allowance for wall movement, and our mortars permit the wall to expand and contract without causing the cracking and spalling that is often seen when a rigid high-strength mortar is installed in a historic structure. Lime mortar also wicks the moisture from the masonry and prevents water from becoming trapped in the wall system.

Our hydrated mortars are available as either a Natural Hydraulic Lime 3.5 or a Type O cement-lime formulation. Natural Hydraulic Lime is a traditional mortar used for damp or exposed areas; hydrated Type O originated in the early 1930s when hydrated lime became available.

- *All-natural*
- *Suitable for historic masonry:*
  - *Breathable*
  - *Vapor permeable*
  - *Accommodates movement*
  - *Wicks moisture out of the walls*
  - *Historically accurate*
- *Preblended, just add water at the jobsite*
- *Eliminates jobsite mixing errors*
- *Reduces labor costs associated with mixing*
- *Factory blended for consistent performance*
- *Long shelf life*
- *Replicates both the appearance and performance of the original mortar*

---

## Product Options:

- Hydrated Type O Lime Mortar is offered in standard white; Natural Hydraulic Lime Mortar in standard buff.
- Choose from 80 pound bags or 3.5 gallon buckets
- 80 pound bags can be tinted using our premeasured color packs; 3.5 gallon buckets are colored in the factory.
- Select from fine, medium, or coarse sand
