
Heritage Prepared Lime Putty Mortars

Our Heritage Lime Putty Mortars are specifically formulated for historic masonry. In traditional load-bearing masonry the joints provided allowance for wall movement, and our lime putty mortar permits the wall to expand and contract without causing the cracking and spalling that is often seen when a rigid high-strength mortar is installed in a historic structure. Lime mortar also wicks the moisture from the masonry and prevents water from becoming trapped in the wall system.

Our Heritage Prepared Lime Putty Mortars are available in a pre-1871 formula (Type "L", which has no portland cement) and an 1872-1931 blend, which includes a premeasured pack of cement that is added onsite (Type "O"). We also offer 42 Special Request colors in addition to the standard white, and we provide custom color matching services upon request.

- *All-natural*
- *Suitable for historic masonry:*
 - *Breathable*
 - *Vapor permeable*
 - *Accommodates movement*
 - *Wicks moisture out of the walls*
 - *Historically accurate*
- *Preblended, ready to use*
- *Eliminates jobsite mixing errors*
- *Reduces labor costs associated with mixing*
- *Factory blended for consistent performance*
- *Long shelf life*
- *Replicates both the appearance and performance of the original mortar*

Product Options:

Standard Lime Putty White or 42 Special Request Colors
Custom color blending is available to match your mortar
Select from fine, medium, or coarse aggregates.
