
Custom Mortar Blending Services

Our **custom blended mortars** are specifically formulated to replicate the original mortar in your building. We use the results of our Mortar Testing and Analysis services to develop a custom-blended mortar that replicates the original material, both in appearance and in composition. This allows for a seamless installation that blends visually with the historic mortar while providing consistent performance in terms of compressive strength and breathability.

We also offer a **custom color matching service** using our preblended products. We will tint any of our standard mortar products to match the color of the mortar in your building.

All of our custom mortar blending services include a ten pound product sample.

- *All-natural*
- *Suitable for historic masonry:*
 - *Breathable*
 - *Vapor permeable*
 - *Accommodates movement*
 - *Wicks moisture out of the walls*
 - *Historically accurate*
- *Preblended and ready to use*
- *Eliminates jobsite mixing errors*
- *Reduces labor costs associated with mixing*
- *Factory blended for consistent performance*
- *Long shelf life*
- *Replicates both the appearance and performance of the original mortar*

Service Options:

Custom Blended Mortar: Custom Matched Material is specifically blended to replicate the binder formulation and sand gradation of the original mortar based on either Package A or Package B lab analysis results. Each blend is unique.

Custom Color Matching: We will tint of our standard preblended mortars to match the color of your original mortar.

Both services include a ten-pound mortar sample for you to install and approve prior to placing a full order.
