# Heritage Masonry Restoration Products & Services

## Material Estimation Guide with Price List – Q3 2021

## About US Heritage Group

For over 20 years US Heritage Group has been focused on the development and manufacture of the highest quality masonry material solutions available in support of historic and non-historic restoration projects across North America. Though often overlooked, the long-term results of entire restoration projects are heavily dependent upon deep understanding of the relationship between building envelope design, operating environment, masonry materials, and people involved in the project. Application of materials, tools and techniques developed to optimize the cost of modern new construction projects lead to poor and potentially damaging results in masonry restoration projects, especially when applied to solid multi-wythe masonry walls.

US Heritage has been directly involved in execution of consulting, forensic analysis, research, development, testing, education, training, installation and performance monitoring of masonry material solutions on a wide variety of masonry restoration projects across the United States spanning three decades. US Heritage Group delivers project value through products and services based on a process-oriented approach that is engineered to optimize assurance of quality, consistency and repeatability of outstanding results.

### Notes and Assumptions

- Joint WxD means joint repointing width by joint repointing depth.
- Repointing depths less than 2 times joint width are not recommended.
- Minimum repointing depths of 2 times joint width and recommended 2.5 times joint width are provided.
- lf means linear feet of mortar joint not linear feet of wall
- sf means square feet of mortar joints when bricks dimensions are standard (8"x2 1/4" x 3 5/8")
- Coverage assumes a standard waste factor of 40%
